**Customer:** Ragnar Bensen  
**Contract Amount:** \$1,488,000  
**Location:** Rockford, Illinois

Mechanical was the piping contractor on the Indeck Peaking Power Plant in Rockford, Illinois. This project, completed in December 2001, is a 150 MW gas turbine plant.

We were able to use CAD to lay out all of the piping and were able to show the customer 3-D isometrics of the piping to aid in coordination of the work.

We also fabricated much of the pipe at our fabrication shop in Freeport. We were able to fabricate indoors to avoid bad weather and were able to control quality and productivity by working in this central location.

On this project, even though we were a subcontractor, the entire project's schedule depended on our work sequence and activity durations. We had a project engineer on site full time in addition to our field staff to make sure that the project ran smoothly and stayed on our schedule.
