Customer: Summit LLC
Contract Amount: \$1,027,000
Location: Rockford, Illinois

Mechanical took part in the construction of A Perryville Place, completed in 2006. The structure consists of four glass and steel buildings connected not at ground level, but by enclosed sky bridges at levels two through four.

We completed the heating and plumbing for the initial building structure. This included installing four boilers, two chillers, five RTUs, and twenty-eight heat transfer units, along with all associated piping.

The HVAC system is similar to the standards of a hospital system. It is continually ventilating, bringing fresh air inside to welcome the retail environment and stimulate higher worker productivity.
